General ideas

Part A. Solvency Introduction: chapter 1-5

1 Solvency

2 A historical review

- 2.1 The Classical Approach
 - 2.1.1 Fluctuation in aggregate claims and ruin theory
 - 2.1.2 Combined ratios and other ratios
 - 2.1.3 Changing in the capital position
 - 2.1.4 Multidimensional systems
- 2.2 The Economic Approach
- 2.3 The European Solvency II project
 - 2.3.1 The basic architecture of Solvency II

3 Managing risks and the enterprise

- 3.1 Fertilizer to the managing of assets and liabilities
- 3.2 Risk management and ALM
 - 3.2.1 Model Office Tools
 - 3.2.2 Tools to manage asset-liability interactions
 - 3.2.2.1 Cash-Flow Testing
 - 3.2.2.2 Immunizations
 - 3.2.2.3 Cash-Flow Matching
 - 3.2.2.4 Asset-Liability Managing, ALM
 - 3.2.3 Simulation Tools and Testing
 - 3.2.4 Dynamic Financial Analysis Tools
- 3.3 Enterprise Risk Management – ERM
 - 3.3.1 The COSO's definition of ERM
 - 3.3.2 The SOA's definition of ERM
 - 3.3.3 The ERM-II – CAS – SOA's definition
 - 3.3.4 The IAIS ERM Standards and Guidance
 - 3.3.5 The IAA's Note on IAIS' key features
 - 3.3.6 The EU Solvency II ERM approach
 - 3.3.7 The financial crisis and ERM

4. A summary of ERM and solvency

5. Elements of Solvency assessment systems

- 5.1 The IAIS Capital Requirements Standards and Guidance
 - 5.1.1 The IAIS standard on the structure of regulatory capital requirements
- 5.2 Modeling Capital Requirement
 - 5.2.1 The general structure
 - 5.2.2 Diversification and mitigation
- 5.3 Valuation of assets and liabilities

5.4 Conservative valuation regimes

Part B. Valuation, Investment and Capital: chapters 6-11

6. Total balance sheet approach

- 6.1 Market consistent valuation
- 6.2 The time value of money
 - 6.2.1 The present value
 - 6.2.2 Discount rates
 - 6.2.3 Long maturities and liquidity considerations
 - 6.2.4 Liquidity premium
- 6.3 Hedging
- 6.4 Risk margins
- 6.5 Accounting

7. Asset valuation

- 7.1 Asset risk margin, ARM, a deduction of non-hedgeable assets

8. Liability valuation

- 8.1 Current estimate of liabilities
- 8.2 Discretionary Participating Features (dpf)
- 8.3 Valuation techniques
 - 8.3.1 Replicating portfolios
 - 8.3.2 Valuation Portfolio
 - 8.3.2.1 VaPo for life insurance
 - 8.3.2.2 VaPo for non-life insurance
 - 8.3.2.3 Some general aspects on the VaPo technique
 - 8.3.3 Valuating the liabilities
- 8.4 Liability risk margin, LRM, an addition to non-hedgeable liabilities
- 8.5 Cost-of-Capital approach to estimate the risk margin
- 8.6 Other liabilities

9. Other valuation issues

- 9.1 Risk mitigation
 - 9.1.1 In-house risk mitigation
 - 9.1.1.1 Pooling
 - 9.1.1.2 Diversification
 - 9.1.1.3 Hedging/Offsetting risks
 - 9.1.2 External risk mitigation
 - 9.1.2.1 Reinsurance
 - 9.1.2.2 Alternative Risk Transfer, ART
 - 9.1.2.3 Hedging
- 9.2 Risk enhancing
- 9.3 Segmentation

10. Investments and own funds

- 10.1 Investments
- 10.2 The available capital: eligible own funds

11 Accounting valuation

- 11.1 Background
- 11.2 International developments
- 11.3 Insurance contracts, revenue recognition and financial instruments
 - 11.3.1 Service contracts
 - 11.3.2 Financial instruments
 - 11.3.3 Insurance contracts
- 11.4 An estimate of the future cash flows
 - 11.4.1 The effect of the time value of money
- 11.5 A margin – IASB’s discussion
- 11.6 A margin – discussions by IAIS and IAA

Part C Modeling and Measuring: chapters 12-21

12. Developing a model

- 12.1 Analytic approximation of an exact model
 - 12.1.1 A first approximation of the exact model
 - 12.1.2 A second approximation of the exact model
- 12.2 Linearization
- 12.3 Homogeneous functions
 - 12.3.1 Euler’s theorem
 - 12.3.2 Corollary to Euler’s theorem
- 12.4 Non-linear Approximations
 - 12.4.1 Second order Approximation
 - 12.4.2 Higher-order functions
 - 12.4.2.1 Quadratic approximations
 - 12.4.2.2 Higher Order Approximations
- 12.5 Risk models
 - 12.5.1 Homogeneous models of degree one
 - 12.5.2 Second order risk models

13. Dependence

- 13.1 Dependence structure
 - 13.1.1 More on copulas and dependence
- 13.2 Dependence strength – rank correlation
 - 13.2.1 Spearman’s rho
 - 13.2.2 Kendall’s tau
- 13.3 Tail dependence
- 13.4 Copula Classes and Families
 - 13.4.1 Copula Class: Archimedean
 - 13.4.2 Copula Class: Elliptical
 - 13.4.3 Other classes of copulas
 - 13.4.3.1 Extreme-value copulas
 - 13.4.3.2 Marshall-Olkin copulas

- 13.4.3.3 Fréchet copulas
- 13.4.3.4 Farlie-Gumbel-Morgenstern copulas
- 13.4.4 A summary
- 13.5 Estimation and Testing
 - 13.5.1 Empirical Copula
 - 13.5.2 Estimating dependence
 - 13.5.3 Estimating copula families
 - 13.5.4 Goodness-of-Fit Tests
 - 13.5.5 Estimating Regression Functions

14. Risk Measures

- 14.1 Properties of risk measures
- 14.2 Families of risk measures
 - 14.2.1 Stone's 3-parameter family of risk measures
 - 14.2.2 Pedersen and Satchell's 5-parameter family of risk measures
 - 14.2.3 Expected Utility Theory-based risk measures
 - 14.2.4 Distorted risk measures
 - 14.2.5 Other types of risk measure classifications
 - 14.2.5.1 Moment-based risk measures
 - 14.2.5.2 Tail-based measures – measures of shortfall risks
 - 14.2.5.3 Generalized Moments
- 14.3 Value-at-Risk and Tail-VaR
 - 14.3.1 Assuming non-normality
 - 14.3.2 Value-at-Risk, VaR
 - 14.3.2.1 Variance of a VaR estimator
 - 14.3.3 Tail Value-at-Risk, Tail-VaR
 - 14.3.3.1 Variance of a TVaR estimator
 - 14.3.4 Tabled distance functions
 - 14.3.5 A summary of the merits of VaR and Tail-VaR
- 14.4 Concentration measures
 - 14.4.1 The Herfindahl-Hirschman index
 - 14.4.2 The Hall-Tideman and Rosenbluth indices
 - 14.4.3 The Entropy measure
 - 14.4.4 Other measures of concentration
 - 14.4.5 Concentration in solvency assessment

15. Capital Requirement – modeling and measuring

- 15.1 General considerations
- 15.2 Top-down approach: Capital allocation
 - 15.2.1 Marginal decomposition and the Euler capital allocation principle
 - 15.2.2 Co-measures
- 15.3 Bottom-up approach: IAA's Base-line Model
 - 15.3.1 A first order approximation
 - 15.3.2 Standard deviation principle as a base-line risk measure
 - 15.3.3 Assume non-normality
 - 15.3.4 A pragmatic solution
 - 15.3.5 Calibration for skewness
 - 15.3.5.1 General calibration

- 15.3.5.2 Calibration
- 15.3.5.3 More on skewness
- 15.3.6 A suggestion

16. Risks and sub-risks

- 16.1 Aggregation of (sub) risks

17 Market risk

- 17.1 Different market risk issues
 - 17.1.1 Scaling: the square-root-of-time scaling
 - 17.1.2 Duration
 - 17.1.3 Interest rate models
- 17.2 Interest rate risk
 - 17.2.1 The IAA model
 - 17.2.2 The GDV model
 - 17.2.3 The CEA model
- 17.3 Equity risk
 - 17.3.1 The IAA model
 - 17.3.2 The GDV model
 - 17.3.2.1 Normal distribution of returns and lognormal distribution of prices
 - 17.3.2.2 Expected value of the continuous return
 - 17.3.2.3 Risk factors for equities (and property/real estate)
 - 17.3.3 The CEA model
 - 17.3.4 Equity duration
 - 17.3.4.1 Dividend Discount Model (DDM)
 - 17.3.4.2 The constant growth DDM
 - 17.3.4.3 Zero growth DDM
 - 17.3.4.4 A two-part dividend stream
 - 17.3.4.5 Some other models
- 17.4 Property risk
 - 17.4.1 The IAA model
 - 17.4.2 The GDV model
 - 17.4.3 The CEA model
 - 17.4.4 Property duration
- 17.5 Currency risk
 - 17.5.1 The IAA model
 - 17.5.2 The GDV model
 - 17.5.3 The CEA model
- 17.6 Other categories

18 Credit risk

- 18.1 Different public credit risk models
 - 18.1.1 The Merton and Vasicek models
 - 18.1.2 Moody's KMV model
 - 18.1.3 The CreditMetrics model
 - 18.1.4 The CreditRisk+ model
- 18.2 Basel II: Credit risk IRB
- 18.3 Reinsurance counterparty default risk
- 18.4 Credit spread risk models

- 18.4.1 The CEA model
- 18.5 Concentration risk

19 Operational risk

- 19.1 Data gathering for the insurance industry
- 19.2 The Basel II capital charge
 - 19.2.1 The basic Indicator Approach (BIA)
 - 19.2.2 The Standardized Approach (SA)
 - 19.2.3 Advanced Measurement Approaches (AMA)
- 19.3 The GDV model
- 19.4 The CEA model

20 Liquidity risk

- 20.1 Managing the liquidity risk
- 20.2 Modeling the liquidity risk
 - 20.2.1 Liquidity Coverage Ratio, LCR
 - 20.2.2 Net Stable Funding Ratio, NSFR

21 Underwriting/Insurance risk

- 21.1 Non-life underwriting risk
 - 21.1.1 Different factor based models used
 - 21.1.2 The GDV model
 - 21.1.3 The CEA model
 - 21.1.4 A one-year time horizon approach
- 21.2 Life underwriting risk
 - 21.2.1 The IAA model
 - 21.2.1.1 Mortality risk
 - 21.2.1.2 Lapse risk
 - 21.2.1.3 Expense risk
 - 21.2.2 The GDV model
 - 21.2.2.1 Cost risk
 - 21.2.2.2 Insurance agent + policyholder default risk
 - 21.2.2.3 Biometric risk
 - 21.2.3 The CEA model
- 21.3 Health underwriting risk

European Solvency II project

Part D. The European Solvency II General ideas, Valuation & Investment: chapters 22-25

22. European Solvency II - General ideas

- 22.1 The general structure
 - 22.1.1 Extracts from the Framework Directive Preamble (“recitals”)
- 22.2 An ERM approach
 - 22.2.1 Extracts from the Framework Directive Preamble (“recitals”)
 - 22.2.2 Reference to the Framework Directive
 - 22.2.3 The main building blocks
- 22.3 The proportionality principle

- 22.3.1 Extracts from the Framework Directive Preamble (“recitals”)
- 22.3.2 Reference to the Framework Directive
- 22.3.3 The interpretation of the proportionality principle
- 22.4 Internal and partial internal models
 - 22.4.1 Extracts from the Framework Directive Preamble (“recitals”)
 - 22.4.2 Reference to the Framework Directive
 - 22.4.3 Approval of internal models
 - 22.4.4 Partial internal models
- 22.5 Group issues
 - 22.5.1 Extracts from the Framework Directive Preamble (“recitals”)
 - 22.5.2 Reference to the Framework Directive
 - 22.5.3 Assessment of group solvency
 - 22.5.3.1 Groups
 - 22.5.3.2 Calculation methods
 - 22.5.3.3 Other group issues
- 22.6 Actions to be taken
 - 22.6.1 Capital add-ons
 - 22.6.1.1 Extracts from the Framework Directive Preamble (“recitals”)
 - 22.6.1.2 Reference to the Framework Directive
 - 22.6.1.3 CEIOPS’ principles for solo capital add-ons
 - 22.6.1.4 CEIOPS’ advice for group capital add-ons
 - 22.6.2 Extension of the recovery period
 - 22.6.2.1 Recital and reference to the Framework Directive
 - 22.6.2.2 CEIOPS’ proposals
- 22.7 Reporting, disclosure and exchange of information
 - 22.7.1 Extracts from the Framework Directive Preamble (“recitals”)
 - 22.7.2 Reference to the Framework Directive
 - 22.7.3 CEIOPS’ proposals
 - 22.7.3.1 Supervisory disclosure

23. European Solvency II - Asset valuation

- 23.1 Extracts from the Framework Directive Preamble (“recitals”)
- 23.2 Reference to the Framework Directive
- 23.3 Valuation principles
- 23.4 Valuation of certain assets
 - 23.4.1 Intangible assets (incl. goodwill)
 - 23.4.2 Properties
 - 23.4.3 Participations
 - 23.4.4 Financial assets
 - 23.4.5 Other assets

24. European Solvency II - Liability valuation

- 24.1 Extracts from the Framework Directive Preamble (“recitals”)
- 24.2 Reference to the Framework Directive
- 24.3 Valuation principles
 - 24.3.1 Best estimate
 - 24.3.1.1 Cash flow projection
 - 24.3.1.2 Options and guarantees
 - 24.3.1.3 Policyholders behaviour
 - 24.3.1.4 Management actions

- 24.3.1.5 Distribution of extra benefits
- 24.3.1.6 Recoverables from reinsurance and SPV contracts
 - 24.3.1.6.1 Simplifications
- 24.3.2 Risk margin
 - 24.3.2.1 Reference undertaking
 - 24.3.2.2 The Cost-of-Capital rate
 - 24.3.2.3 General methodology for calculation of the risk margin
 - 24.3.2.4 Simplifications
- 24.3.3 Risk-free interest rate term structure
- 24.4 Segmentation
 - 24.4.1 Segmentation for life technical provision
 - 24.4.2 Segmentation for non-life technical provisions
 - 24.4.3 Segmentation for health technical provisions
- 24.5 Simplifications and Proxies
 - 24.5.1 Non-life insurance specific
 - 24.5.2 Life insurance specific
- 24.6 Other liabilities

25. European Solvency II - Eligible own funds and investments

- 25.1 Extracts from the Framework Directive Preamble (“recitals”)
- 25.2 Reference to the Framework Directive
- 25.3 Own funds
 - 25.3.1 Basic own funds
 - 25.3.2 Ancillary own funds
- 25.4 Special purpose vehicles, SPVs
- 25.5 Ring-fenced funds
- 25.6 Participations
- 25.7 Investments

Part E. The European Solvency II standard formula: chapters 26-34

26. European Solvency II - the standard formula framework

- 26.1 Extracts from the Framework Directive Preamble (“recitals”)
- 26.2 Reference to the Framework Directive
- 26.3 General issues
 - 26.3.1 The purpose of the SCR
 - 26.3.2 Risk measure
 - 26.3.3 Confidence level
 - 26.3.4 Time horizon
 - 26.3.5 Going concern vs. run-off/winding up assumptions
 - 26.3.6 Risk classification
- 26.4 The modular approach and dependence structure
 - 26.4.1 Standard formula dependence
- 26.5 Adjustments
 - 26.5.1 Loss absorbing capacity of technical provisions
 - 26.5.2 Loss absorbing capacity of deferred taxes
- 26.6 Risk mitigation techniques
 - 26.6.1 Allowance for financial mitigation techniques
 - 26.6.2 Allowance for reinsurance mitigation techniques

- 26.6.3 Treatment of Special Purpose Vehicles
- 26.7 Limiting issues
 - 26.7.1 Ring-fenced funds
 - 26.7.2 Participations
- 26.8 Undertaking specific parameters
- 26.9 Simplifications
- 26.10 Intangible assets risk module

27. European Solvency II standard formula - Market risk

- 27.1 General features
 - 27.1.1 Standard formula
 - 27.1.2 The delta-NAV approach
 - 27.1.3 Investment funds
 - 27.1.4 SPV notes
- 27.2 Interest rate risk
 - 27.2.1 Simplifications
- 27.3 Equity risk
- 27.4 Property risk
- 27.5 Currency risk
- 27.6 Spread risk
 - 27.6.1 Simplifications
- 27.7 Concentration risk
 - 27.7.1 Financial concentration risk
 - 27.7.2 Property concentration risk
 - 27.7.3 Simplifications
- 27.8 Dampener
 - 27.8.1 Equities: Symmetric dampener adjustment
 - 27.8.2 Equities: Duration dampener

28. European Solvency II standard formula - Credit Risk

- 28.1 General issues
- 28.2 Counterparty default risk
 - 28.2.1 Standard formula
 - 28.2.2 Type 1 capital charge
 - 28.2.3 Type 2 capital charge
- 28.3 Calculation of LGD
- 28.4 Probability of default
- 28.5 Other issues

29. European Solvency II standard formula - Operational risk

- 29.1 General features
- 29.2 Standard formula

30. European Solvency II standard formula - Liquidity risk

31. European Solvency II standard formula - Non-life Underwriting risk

- 31.1 General features
 - 31.1.1 Changes as compared to QIS4
 - 31.1.2 Standard formula
- 31.2 Reserve risk and Premium risk modules

- 31.2.1 Undertaking specific parameters
 - 31.2.1.1 USP for reserve risk
 - 31.2.1.2 USP for premium risk
- 31.2.2 Simplifications
- 31.3 Non-life CAT risk
 - 31.3.1 Standard scenarios approach
 - 31.3.2 Alternative approach
 - 31.3.3 Simplifications

32. European Solvency II standard formula - Life Underwriting risk

- 32.1 General features
 - 32.1.1 Standard formula
- 32.2 Mortality risk
 - 32.2.1 Simplifications
- 32.3 Longevity risk
 - 32.3.1 Simplifications
- 32.4 Disability risk
 - 32.4.1 Simplifications
- 32.5 Expense risk
 - 32.5.1 Simplifications
- 32.6 Revision risk
 - 32.6.1 Undertaking specific parameters
 - 32.6.2 Simplifications
- 32.7 Lapse risk
 - 32.7.1 Simplifications
- 32.8 Life CAT risk
 - 32.8.1 Simplifications

33. European Solvency II standard formula - Health underwriting risk

- 33.1 General features
 - 33.1.1 Standard formula
 - 33.1.2 Simplifications
- 33.2 SLT Health underwriting risk
 - 33.2.1 Mortality risk
 - 33.2.2 Longevity risk
 - 33.2.3 Disability risk
 - 33.2.3.1 SLT Health Disability risk for medical insurance
 - 33.2.3.2 SLT Health Disability risk for income insurance
 - 33.2.4 Expense risk
 - 33.2.5 Lapse risk
 - 33.2.6 Revision risk
 - 33.2.6.1 Undertaking specific parameters
 - 33.2.7 Life CAT risk
- 33.3. Non-SLT Health underwriting risk
 - 33.3.1 Reserve risk and Premium risk
 - 33.3.1.1 Undertaking specific parameters
 - 33.3.2 Non-life CAT risk

34. European Solvency II standard formula - Minimum Capital Requirement (MCR)

34.1 General features

34.2 Standard formula

34.3 MCR linear formula

34.3.1 MCR_A for non-life activities practiced on a non-life technical basis

34.3.2 MCR_B for non-life activities technically similar to life

34.3.3 MCR_C for life activities practiced on a life technical basis

34.3.4 MCR_D for life activities – supplementary obligations practiced on a non-life technical basis.

34.4 Composite undertakings

34.5 Other issues

34.5.1 Deferred taxes

34.5.2 Quarterly calculation

Part F. Backgrounds and Calibrations: Appendices A – P

Appendix A. Some statistical clarifications

A1. Conditional variances and covariances

A2. Mean square error

A3. Euler's theorem and corollary

A3.1 Euler's theorem

A3.2 Corollary

A3.3 Quadratic approximation

Appendix B. Cornish-Fisher expansion

Appendix C. List of different papers that has been published by CEIOPS

Consultation Papers

Issue Papers

Appendix D. The European Solvency II process

D.1 Phase I – the learning phase: 1999/2000-2003

D.1.1 Lamfalussy procedure

D.1.2 Summary of phase I

D.1.3 The KPMG report

D.1.4 The life report

D.1.5 The non-life report

D.1.5.1 Provisions for outstanding claims

D.1.5.2 Provisions for equalization

D.1.6 The Sharma report

D.2 Phase II – the framework directive phase: 2003-2008/2009

D.2.1 Recommendations for the first pillar

D.2.2 Recommendations for the second pillar

D.2.3 Recommendations for the third pillar

D.3 Further steps

D.3.1 The creation of CEIOPS and the Stakeholders' action

D.3.2 The organization and basic architecture of Solvency II

- D.3.3 Road map
 - D.3.3.1 The basic architecture
 - D.3.3.2 Three waves of specific calls for advice
 - D.3.3.3 A brief summary
- D.4 The steps towards a solvency directive
 - D.4.1 EIOPC' meeting December 2005
 - D.4.2 EIOPC' meeting April 2006
 - D.4.3 EIOPC' meeting July 2006
 - D.4.4 EIOPC' meeting November 2006
 - D.4.5 EIOPC' meeting July 2007
 - D.4.6 EIOPC' 8th – 12th meetings November 2007-April 2009
- D.5 The draft Framework directive
 - D.5.1 The work-stream of the European Parliament
 - D.5.2 The work-stream of the Council
 - D.5.3 The triologue
 - D.5.4 The adoption in the European Parliament
 - D.5.5 The adoption in the ECOFIN Council
- D.6 Consultations for implementing measures – CEIOPS' work-stream
- D.7 Phase III – the implementing phase: 2009 - 2012
 - D.7.1 CEIOPS' 1st launch of draft final advises
 - D.7.2 CEIOPS' 2nd launch of draft final advises
 - D.7.3 CEIOPS' 3rd launch of draft final advises
 - D.7.4 CEIOPS' Final Advice
- D.8 The Framework Directive Preamble (recitals)
- D.9 The Framework Directive Structure

Appendix E. European Solvency II - General ideas

- E.1 The proportionality principle
- E.2 Internal models
- E.3 Groupe issues
 - E.3.1 The default method – accounting consolidation
 - E.3.2 The alternative method – deduction and aggregation method
- E.4 Eligible own funds
 - E.4.1 The principles
 - E.4.2 Classification of own funds into tiers
- E.5 Investments

Appendix F. European Solvency II - Asset valuation

Appendix G. European Solvency II - Liability valuation

- G.1 Initial thoughts
 - G.1.1 Life insurance technical provisions
 - G.1.2 Non-life insurance technical provisions
- G.2 QIS1 – QIS4 Valuation of technical provision
 - G.2.1 General Principles
 - G.2.2 Hedgeable risks or obligations
 - G.2.3 Non-hedgeable risks or obligations – best estimate
 - G.2.3.1 General assumptions
 - G.2.3.2 Discounting

- G.2.3.3 Expenses
- G.2.3.4 Taxation
- G.2.3.5 Reinsurance and SPV's
- G.2.3.6 Future premiums from existing contracts
- G.3 Life technical provisions
 - G.3.1 Segmentation
 - G.3.2 Grouping of contracts
 - G.3.3 Behavior of policyholders and management
 - G.3.4 With-profit business
 - G.3.5 Linked business
 - G.3.6 Other issues
- G.4 Non-life technical provisions
 - G.4.1 Segmentation
 - G.4.2 Best estimate
 - G.4.3 Premiums provisions
 - G.4.4 Post-claims technical provisions – outstanding claims provisions
- G.5 Simplifications and Proxies
 - G.5.1 Proxies
 - G.5.2 Simplifications: Reinsurance recoverables
 - G.5.3 Simplifications: Life insurance best estimate
 - G.5.4 Simplifications: Non-life insurance best estimate
 - G.5.5 Proxies: Non-life insurance best estimate
- G.6 Risk margin for non-hedgeable risks/obligations
 - G.6.1 General Considerations
 - G.6.2 Simplifications
 - G.6.2.1 Credit risk: Counterparty default risk
 - G.6.2.2 Non-life underwriting risk
 - G.6.2.3 Health underwriting risk
 - G.6.2.4 Life underwriting risk
 - G.6.2.5 Risk-absorbing effect of future profit sharing
 - G.6.2.6 Alternative simplifications
 - G.6.2.6.1 Non-life underwriting risk
 - G.6.2.6.2 Life underwriting risk
 - G.6.2.6.3 Health underwriting risk
 - G.6.2.7 Overall SCR simplifications
 - G.6.3 Risk margin proxies
- G.7 Other liabilities

Appendix H. European Solvency II - the standard formula framework

- H.1 Early thoughts and ideas from 2005
 - H.1.1 The purpose of the SCR
 - H.1.2 Risk measure
 - H.1.3 Confidence level
 - H.1.4 Time horizon
 - H.1.5 Unacceptable level of capital
 - H.1.6 Going concern vs. run-off/winding up assumptions
 - H.1.7 Risk classification
 - H.1.8 Risk dependencies
- H.2 QIS2

- H.2.1 The overall QIS2 SCR calculation
 - H.2.1.1 BSCR: Basic Solvency Capital Requirement
 - H.2.1.2 RPS: reduction for profit-sharing using the k-factor
 - H.2.1.3 NL_PL: Non-life expected profit or loss
- H.3 QIS3
 - H.3.1 The overall SCR calculation
 - H.3.2 The general approach to risk mitigation
 - H.3.3 Composites (insurers carrying out both life and non-life business)
 - H.3.4 Adjustments for the risk mitigating properties of future profit sharing
 - H.3.5 Ring-fenced funds
- H.4 QIS4
 - H.4.1 Segmentation
 - H.4.2 The overall SCR calculation
 - H.4.3 Simplifications in the SCR calculation
 - H.4.4 Adjustments for risk absorbing properties
 - H.4.4.1 Adjustments for risk absorbing properties of future profit sharing
 - H.4.4.2 Adjustments for risk absorbing properties of deferred taxation
 - H.4.4.3 Simplification and an alternative method
 - H.4.5 Risk mitigation in the SCR

Appendix I. European Solvency II - Market risk

- I.1 General features
 - I.1.1 Background
 - I.1.2 QIS2-QIS4
 - I.1.3 Calibration
- I.2 Interest rate risk
 - I.2.1 Background
 - I.2.2 QIS2-QIS4
 - I.2.3 Calibration
- I.3 Equity risk
 - I.3.1 Background
 - I.3.2 QIS2-QIS4
 - I.3.3 Calibration
 - I.3.4 Equity duration
 - I.3.5 Dampener as alternative to the equity risk
- I.4 Property risk
 - I.4.1 Background
 - I.4.2 QIS2-QIS4
 - I.4.3 Calibration
 - I.4.4 Property duration
- I.5 Currency risk
 - I.5.1 Background
 - I.5.2 QIS2-QIS4
 - I.5.3 Calibration

Appendix J. European Solvency II - Credit Risk

- J.1 QIS2 proposal

- J.2 Counterparty default risk
 - J.2.1 The QIS3 and QIS4 model
 - J.2.2 Calibration
- J.3 Credit spread risk
 - J.3.1 The QIS3 and QIS4 model
 - J.3.2 Calibration
- J.4 Concentration risk
 - J.4.1 The QIS3 and QIS4 model
 - J.4.2 Calibration
 - J.4.3 Options in QIS 4

Appendix K. European Solvency II - Operational risk

- K.1 Standard formula
- K.2 Calibration

Appendix L. European Solvency II - Liquidity risk

Appendix M. European Solvency II - Non-life Underwriting risk

- M.1 General features
 - M.1.1 Background
 - M.1.2 High-level QIS2-QIS4
 - M.1.3 QIS3 + QIS4
- M.2 Reserve risk and Premium risk modules
 - M.2.1 QIS 2 model (2006)
 - M.2.2 QIS 3 model (2007)
 - M.2.3 QIS 4 model (2008)
 - M.2.4 Calibration
- M.3 Non-life CAT risk
 - M.3.1 QIS2
 - M.3.2 QIS3
 - M.3.3 QIS4

Appendix N. European Solvency II - Life Underwriting risk

- N.1 General features
 - N.1.1 Background
 - N.1.2 QIS2-QIS4
- N.2 Mortality risk
 - N.2.1 Background
 - N.2.2 QIS2-QIS4
 - N.2.3 Calibration
- N.3 Longevity risk
 - N.3.1 Background
 - N.3.2 QIS2-QIS4
 - N.3.3 Calibration
- N.4 Morbidity risk
 - N.4.1 Background
 - N.4.2 QIS2
- N.5 Disability risk

- N.5.1 Background
- N.5.2 QIS2-QIS4
- N.5.3 Calibration
- N.6 Lapse risk
 - N.6.1 Background
 - N.6.2 QIS2-QIS4
 - N.6.3 Calibration
- N.7 Expense risk
 - N.7.1 Background
 - N.7.2 QIS2-QIS4
 - N.7.3 Calibration
- N.8 Life CAT risk
 - N.8.1 Background
 - N.8.2 QIS2-QIS4
 - N.8.3 Calibration
- N.9 Revision risk
 - N.9.1 Background
 - N.9.2 QIS2-QIS4
 - N.9.3 Calibration

Appendix O. European Solvency II - Health underwriting risk

- O.1 General features
- O.2 The QIS2 proposal
 - O.2.1 QIS2 experience
- O.3 The QIS3 proposal
 - O.3.1 QIS3 calibration
- O.4 The QIS4 proposal
 - O.4.1 Health long term underwriting risk module
 - O.4.1.1 Health expense risk
 - O.4.1.2 Health claims/mortality/cancellation risk
 - O.4.1.3 Health epidemic/accumulation risk
 - O.4.2 Accident and health short-term underwriting risk module
 - O.4.2.1 Accident and health short-term premium and reserve risk
 - O.4.2.2 Accident and health short-term CAT risk
 - O.4.3 Workers compensation underwriting risk module
 - O.4.3.1 Workers compensation “General”: premium and reserve risk
 - O.4.3.2 Workers compensation: Annuities
 - O.4.3.2.1 Annuities longevity risk
 - O.4.3.2.2 Annuities disability risk
 - O.4.3.2.3 Annuities revision risk
 - O.4.3.2.4 Annuities expense risk
 - O.4.3.3 Workers compensation: CAT-risk
 - O.4.4 QIS4 Calibration

Appendix P. European Solvency II - Minimum Capital Requirement (MCR)

- P.1 Background
- P.2 QIS2
 - P.2.1 QIS2 experience

P.3 QIS3
P.3.1 Calibration of QIS3
P.4 QIS4
P.4.1 Calibration of QIS4
